

BRISTAN

The Collection 2011

packed with pure enjoyment

Enjoy your Bathroom

Whether you're undertaking a complete bathroom renovation or are just looking for a quick update, a shiny new shower, tap or even accessories can really make a difference.

The Bristan Collection features a gorgeous selection of coordinating showers, taps and accessories to help make it easy for you to find exactly what you need to add that extra-special touch to your bathroom; whatever your taste or budget.

So grab a cup of tea (or a glass of wine), put your feet up and enjoy browsing through the following pages to see just how easy it is to transform your bathroom and turn your dreams into reality. It's exciting isn't it?

your enjoyment GUARANTEE

At Bristan, we want you to enjoy everything about your new tap or shower. From the way it looks to the way it works, we've designed and tested it all. So go on, Enjoy!

ENJOYMENT GUARANTEED

Established back in 1977, Bristan has years of experience in the bathroom industry. Today, we're the market leader in the supply of taps and showers. In fact, around one in five taps sold in the UK is a Bristan tap. We're also the first choice for plumbers; a recent independent 'voice of the customer' survey, nine out of ten plumbers said they fit Bristan taps and showers. Over two thirds said that Bristan was their preferred tap brand.

So, what's the secret to our success? Firstly, it's down to the quality of our design. Our in house design team creates styles that not only look good, but are easy to use, easy to clean and are specified to the very highest quality standards.

We also offer great choice, with many of our tap ranges available with matching showers to help you create a coordinated look in your bathroom. That's not all. We want to make everything about your experience of Bristan an enjoyable one so, in addition to great design products that are enjoyable to use, we also have a mission to deliver an 'extraordinary customer experience.' This includes a '24 hour delivery promise' which means that if you want to order a product from your local stockist but it's out of stock, we promise to get it to them the very next day. It also means providing a 70 strong team of customer service advisors who are available to take your call from 8am to 8pm Monday to Thursday, 8am to 6pm Friday (except Bank Holidays) and 8am to 2pm on a Saturday. And, if you do ever have a problem with one of our products once it has been installed, our BristanCare team of engineers can be called upon to solve any issues.

Need more reasons to choose Bristan?

✓ Smart Design

We've listened to our customers to find out what they need from their taps and showers to create a coordinated range of products that not only reflect today's home design trends, but that are easy for your plumber to install and enjoyable for you to use.

✓ Solid guarantees

All of our products are tested before despatch and a five year parts guarantee (unless otherwise stated) covers any defect in manufacture. See full details of our guarantees at www.bristan.com/guarantees

✓ Customer Support

Whether you need a friendly voice to advise you on the best shower for your water system, a speedy response from an email query or a quick solution to a problem with one of our products, Bristan's Customer Service team includes 70 advisors who are all fully trained to help.

customercare@bristan.com

Customer Service: 0844 7016273

✔ BristanCare

Our service doesn't stop when the product leaves the store. BristanCare, our dedicated service division with a national network of fully-trained engineers provides free warranty support (subject to guarantees and registration), and extended warranty cover to give you peace of mind for years to come.

BRISTANcare
serviceyoudeserve

✔ ecosmart

Save water, save energy, save money. Our ecosmart products have been designed to be kinder to our environment so you'll find a choice of taps and showers with clever features to help you to reduce the amount of water you waste in the home.

✔ Inclusive Design

If you see the iD label on a product, you'll know that it not only features stunning good looks, it's also been approved by an occupational therapist as being easy to use by people of all ages, sizes and abilities.

liveable style

Isn't it annoying when you buy something new for your home which might look nice, but doesn't work the way you need it to? You won't find that with Bristan taps and showers. Our in-house design team create products that offer 'liveable style.' This means that they not only look great, but incorporate features including clear markings and easy turn handles to make them easy to use. And, look out for the iD logo on selected products. This means that they have been approved by an occupational therapist as easy to use by all ages and abilities.

Choose the right shower for your home

There are three basic categories of shower - mixer, power and electric. Which type you choose will depend on how your hot water system works. Follow our guide below to make sure you pick the right shower for your home, or have a chat with your plumber.

Mixer/Thermostatic Mixer

A mixer shower takes water from both the hot and cold water supplies and mixes them to achieve the preferred temperature. Thermostatic mixers include a thermostatic device which will accurately maintain the temperature. Some mixer showers will require high water pressures in order to work effectively. These are High Pressure systems. Look out for the HP symbol on selected showers within this brochure.

Power Shower

Works in the same way as a mixer shower, but includes an integral pump to boost the flow of water for an exhilarating shower experience. Power showers are ideal if you have low water pressure but should not be used with a high pressure unvented system.

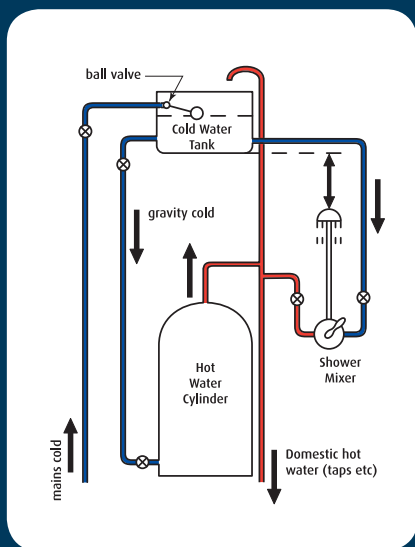

Electric Shower

These are a great choice for larger households where there is high demand for hot water. Electric showers only require a cold water mains feed. This is because water is heated up as it passes through an integral heater within the shower unit, rather than coming from the hot water cylinder, so there's always enough hot water to go round.

How to identify your water system

Most homes in the UK will have a 'traditional' hot water system, made up of three elements; a boiler to heat the water, a hot water cylinder to store the heated water and a cold water storage tank for taps and showers, and radiators to heat the property using water from the boiler. This will be the case for many of us, but advances in technology also mean that there are now systems that do not need to store hot or cold water to deliver it on demand, which is great news for small properties which are short on storage space. Use our guide below to identify your water system and find the best shower for you:

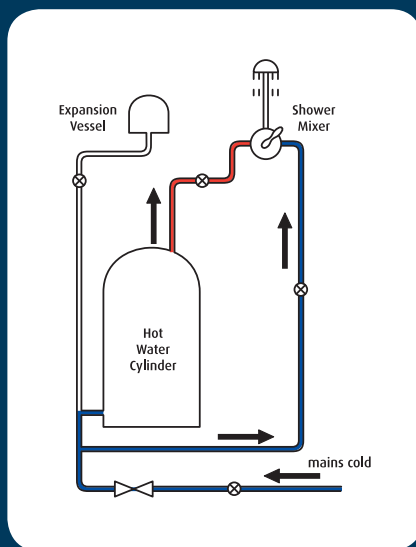

Gravity-fed (Vented system)

This type of system will be found in most homes in the UK. If you have a gravity system, you'll have a cold water tank in the loft and a hot water cylinder directly below it (usually in the airing cupboard). The water in the cylinder is heated by a boiler and fed to taps and showers, with the boiler also feeding radiators around the house. As the water in the cylinder is used up, it is replaced with cold from the tank above, which in turn is 'topped up' from the mains water supply via the ball valve. To work properly, the pressure from both water sources will need to be balanced. Your plumber will be able to tell you if your system is balanced and if it isn't, will be able to fit either a pump or a pressure reducing valve (if mains cold water fed).

Suitable shower types: (Low pressure variants)

- Thermostatic Mixer
- Manual Mixer
- Power Shower
- Electric Shower

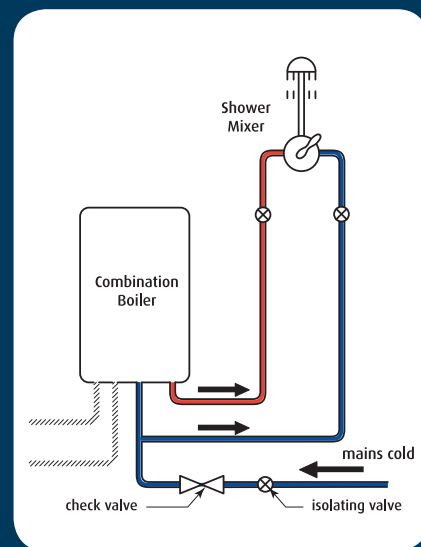

Unvented System

An unvented system has a hot water storage cylinder that takes cold water directly from the mains. The water is heated by an in-built coil which is either operated electrically, or with hot water from the central heating boiler. As the coil gets hot, it heats the cold water within the cylinder ready for use. As everything is under the pressure of mains water, the flow rates are much better and you won't need a pump to get a powerful shower. The whole heating system is completely sealed (i.e. "unvented") and they can be installed virtually anywhere, so you might find yours in a storage cupboard. A lot of large new homes will have one of these systems, where there is a high demand for hot water.

Suitable shower types:

- Thermostatic Mixer
- Manual Mixer
- High Pressure Units
- Electric Shower

Combination (Combi) Boiler

A combi boiler can be located anywhere within the home and heats water 'on demand' using a heat exchanger when a hot tap is turned on. A combi boiler is fed directly from the mains, so it doesn't need a hot water cylinder or a cold water tank. It also heats water for central heating. Combi boilers are usually fitted in relatively small houses or flats, where there isn't a great demand for hot water.

Suitable shower types

- Electric Shower
- Manual Mixer
- Thermostatic Mixer

Stunning Showers

Don't you just love a good shower? Whether you're looking for something to wake you up in the morning, or reinvigorate you from a long hard day at work, nothing quite beats the joy of a shower. Available in a host of options; from simple but stunning control and kit combinations, to luxury shower poles with built-in body jets, Bristan's comprehensive range will help you to achieve your perfect showering experience, while adding a stunning focal point for your bathroom.

Browse through the following pages to discover our gorgeous collection of complete showers in a choice of contemporary or traditional designs, or skip to pages 28 to 41 where you'll find a treasure-trove of dazzling shower valves and kits which you can 'Pick n Mix' to create your very own bespoke showering system.

Shower Poles

These stunning shower poles feature a built-in shower valve and a fixed head all in one beautiful package. Selected models are also available with an additional handset.

Electric Showers

Be happy with our new range of electric showers – Smile, Glee, Joy and Bliss.

Not only do these showers look great, but unlike some electric showers, each model in the Bristan range benefits from five water and electrical cable entry points so there is plenty of flexibility to fit your existing pipe work. The footprint of the unit has also been designed to cover most fixings left by your old shower and the brackets on the riser rail can also be adjusted to cover over any old holes, keeping installation time and costs to a minimum.

All are designed to be easy to clean while separate temperature and flow controls make them really easy to use. Most have smart digital temperature displays and, if you're a gadget-lover, you'll love the touch control feature on the Bliss shower.

Joy and Bliss also incorporate a 'phased shutdown' which clears all of the hot water out of the shower when you turn it off so that the next person who uses it doesn't get a blast of hot water when they turn it back on. And it helps reduce build up of limescale – good news if you live in a hard water area. Some models even include a handy storage shelf for your shampoos and shower gels.

Pick 'n' Mix Showers

Creating your perfect shower is easy with our Pick 'n' Mix collection. Start with a shower valve and add on a shower kit with a handset, a fixed shower head, body jets or even a bath fill. The possibilities are almost endless. Need more help? Check out our jargon buster on page 87.

Choose your valve

The valve is the most important element because it controls your shower. The model you choose will also effect what add-ons you can have.

Shower Valve with Two Stopcocks

This type of valve has three dials. One dial controls the temperature, while the other two are stopcocks which allow you to divert water to two different outlets. So, for example, you could have a standard fixed head controlled by one stopcock and a bath fill controlled by the other.

Dual Control Shower Valve

These valves include a thermostatic control for temperature and a stopcock which turns the water on or off. This type of valve can be mixed and matched with a shower kit or fixed shower head only.

Shower Valve with Two Outlet Diverter and Stopcock

This model includes a temperature control and a stopcock which you can use to control flow to your shower. The third dial allows you to divert water to an additional two outlets so you could control a showerhead, bath fill and body jets, all from the same valve.

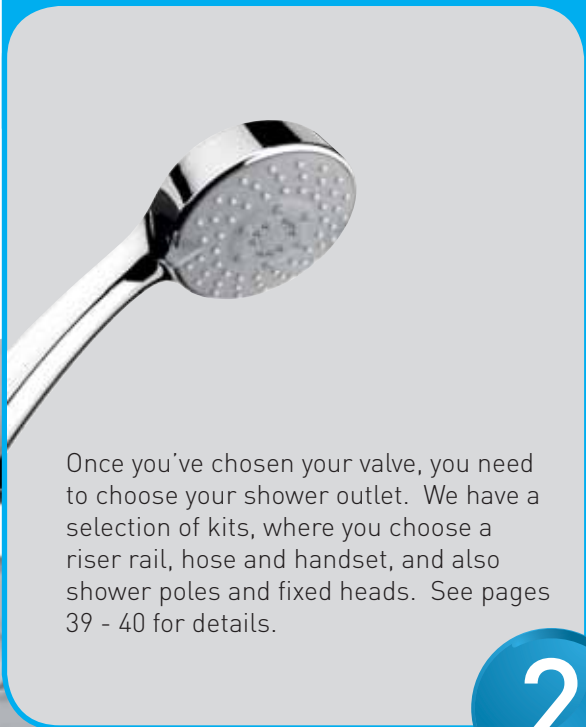

Shower Valve with Three Outlet Diverter and Stopcock

This valve works in the same way as the one to the left however this time, the integral diverter allows you to divert water to an additional three outlets. Just think of the possibilities!

1

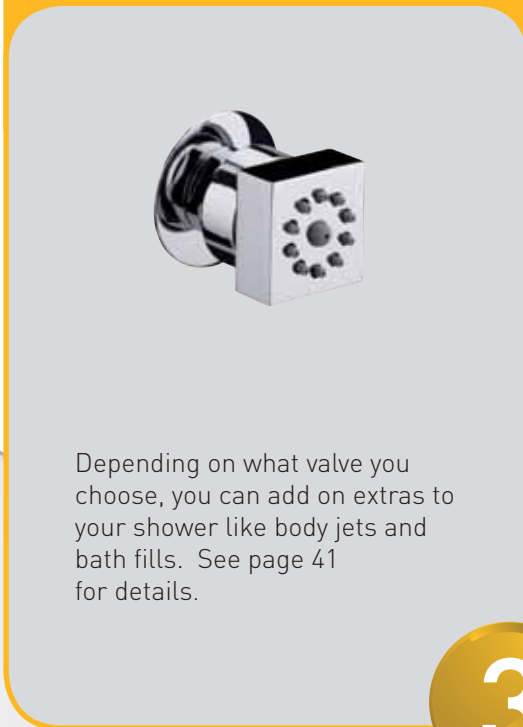

Choose your shower outlet

Once you've chosen your valve, you need to choose your shower outlet. We have a selection of kits, where you choose a riser rail, hose and handset, and also shower poles and fixed heads. See pages 39 - 40 for details.

2

Choose your add ons

Depending on what valve you choose, you can add on extras to your shower like body jets and bath fills. See page 41 for details.

Taps and Mixers

They may be one of the smallest features in the bathroom, but taps and mixers can make a real difference when it comes to bathroom design. Update them regularly for a quick makeover, or use them to add the finishing flourish to your bathroom renovation.

Whatever project you're working on, you'll be sure to find what you need in the Bristan taps and mixer collection. With a host of beautifully sculptured styles in a choice of contemporary or traditional designs, Bristan's range has been developed with ease of installation and ease of use in mind. So go on, enjoy!

BRISTAN
ecosmart

Save water instantly by fitting a flow regulator to your tap or shower. Bristan has a range of flow regulators available that will reduce water usage to as little as one litre a minute on taps and four litres a minute on showers. Small changes. Big savings. Prices start from around £2.

See www.bristan.com/ecosmart for our full range.

N.B. 3 year guarantee applies to all products with a gold finish.

Jargon Buster

Adjustable Riser

An attachment to the shower pole which allows the shower head to be adjusted up and down to allow for different heights.

Basin Mixer

A basin tap that will mix hot and cold water and deliver it through a single spout.

Bath Filler

Like a basin mixer, a bath filler will mix hot and cold water and deliver through a single spout.

Bath Shower Mixer

Bath tap fixture which incorporates a shower attachment.

Bath Shrouds

Used on freestanding baths to cover the pipe work to the bath taps.

Body Jets

A shower fixture that emits jets of water to the body.

Clicker Waste

A fitted alternative to a plug that you push and click to drain the water.

Concealing Plate

A flat finishing plate that fits over a shower valve that has been recessed into the wall.

Diverter

A shower control that will 'divert' the water flow to additional handsets, body jets or (like you see in many hotels) to a bath filler.

Globe Taps

Globe shaped taps that are fitted to the wall.

Handset

A detachable shower head that can be directed to the body by hand.

Fixed Head

Shower head fixed permanently to the wall (or shower pole) without adjustable height.

Mixer Shower

A shower that mixes hot and cold water supplies together to achieve the required temperature.

Pop-up Waste

An alternative to the traditional plugs, a pop-up waste comprises of a stopper connected by levers to a control knob on the tap. When the knob is pushed down the stopper is lifted to allow water to drain away. When the knob is pulled up the stopper seals the plug hole.

Recessed Shower Valve

A shower control hidden within a finished wall with only the operating handles and a concealing plate visible.

Riser Rail

A vertical rail to allow height adjustment of a showerhead. Rigid Riser Showerhead fixed to wall with exposed pipework from the shower head to the control valve.

Sequential Shower

Single control mixer shower – controls on/off and temperature in one dial but has no control over flow.

Shower Hose

A flexible pipe that connects between the showerhead and the shower control.

Side bodies

Hot and cold temperature and flow controls for bath fills.

Stopcock

A hand operated valve that turns the water flow off and on.

Thermostatic Mixer Shower

Showers that use a temperature-sensitive cartridge to maintain a safe temperature. Will shut off if there's a supply failure of either cold or hot water.

Valve

The part of the shower that controls water flow and temperature.
